It's time to upgrade

Now that you've positioned your organisation to take advantage of the latest technological advancements available for business management, it's time to start comparing solutions.

Before you begin, it's best to have a clear view of the focus areas for your business' growth strategy to narrow your search to only solutions whose functionality aligns most with your needs. Start by asking yourself these questions about the core areas of your business:

1

Do you often carry too much inventory?
Is your cash flow tied up with excess inventory?

2

Does your organisation struggle with inaccuracies in accounting like unrecorded transactions, and discrepancies in transaction data? Are manual monthly bank reconciliations eating up valuable time?

3

Are payments processes taking up excessive time?
Are you having to chase customers with late invoices?
Is it difficult to track which invoices have been paid and which are still outstanding?

This guide highlights the key technological features required to overcome the challenges today's retailers are facing.

Transform at the speed of insight

When you can manage multiple locations and business functions from one source, things move quickly. Unlike older systems that don't support seamless collaboration between stakeholders, today's business management solutions bring it all together—purchasing, sales, customer service, and financial management—to create one unified system.

A robust business management solution should include these data intelligence features to speed up efficiency in your financial processes while increasing speed and productivity:

Cut through complexity and silos

In today's hyper-connected society, technology has changed the way people work. Your current system may not support the anytime-anywhere mantra many organisations are adopting for increased responsiveness. Limitations in connectivity can also lead to data discrepancies and cause admin time traps as it's transferred between system silos.

These features are crucial when cutting complexities and eliminating silos that jeopardise accuracy:

Built for the bottom line

A good business management solution improves how you do business today. The best value is in a solution that enables cost efficiency today and informs your financial decisions for the future.

Look for these features to support your business' continued financial health in the long term:

Keep your edge with Sage Intacct Cloud Retail

Sage Intacct Cloud Retail takes the technology that makes business management easier and drives the cost efficiencies that positively impact your business' bottom line. Then adds in real-time EPOS functionality, fully scalable and feature-rich.
